# **FCC** [**EST**REPORT

**ISSUED BY** Shenzhen BALUN Technology Co., Ltd.

FOR

## **Smart Projector**

**ISSUED TO** Guizhou CVIM Technology Co., Ltd.

4th Floor, 5th R&D Building, Zunyi Software Park, Xiazi Town, Xinpu New District, Zunyi, Guizhou

Report No.: BL-SZ1760349-604 **EUT Name:** Model Name: T8e Brand Name: Test Standard: FCC ID:

**Smart Projector** wowoto 47 CFR Part 15 Subpart E **2AKWS-TXSERIES** 

Test conclusion: Pass Jun. 21, 2017 ~ Sep. 05, 2017 Test Date: Sep. 06, 2017 Date of Issue:

NOTE: This test report of test results only related to testing samples, which can be duplicated completely for the legal use with the approval of the applicant; it shall not be reproduced except in full, without the written approval of Shenzhen BALUN Technology Co., Ltd. BALUN Laboratory. Any objections should be raised within thirty days from the date of issue. To validate the report, please contact us.

#### **Revision History** Version Issue Date **Revisions Content** Aug. 16, 2017 Rev. 01 Initial Issue Update item of 26dB Bandwidth and Rev. 02 Aug. 29, 2017 99& Bandwidth; Add the frequency stability and so on. Amended the test and limit for Sep. 06, 2017 Rev. 03 Radiated Spurious Emissions

## 1 ADMINISTRATIVE DATA (GENERAL INFORMATION)

## 1.1 Identification of the Testing Laboratory

	Company Name	Shenzhen BALUN Technology Co., Ltd.
	∧ ddrooo	Block B, 1st FL, Baisha Science and Technology Park, Shahe Xi Road,
	Address	Nanshan District, Shenzhen, Guangdong Province, P. R. China
	Phone Number	+86 755 6685 0100

1.2 Identification of the Responsible Testing Location

J	enuncation of the	e Responsible resulting Location		
	Test Location	Shenzhen BALUN Technology Co., Ltd.		
	Address	Block B, 1st FL, Baisha Science and Technology Park, Shahe Xi Road Nanshan District, Shenzhen, Guangdong Province, P. R. China		
Accreditation Certificate  The laboratory has been listed by electromagnetic emission measurement test site are 11524A-1.  The laboratory is a testing organization accredited testing laboratory. The designation accredited testing laboratory accreditation accreditation for Laboratory Accreditation 17025. The accreditation certificate is 43. The laboratory is a testing organization accreditation Service for Conformity Accreditation Service for Conformit		The laboratory has been listed by Industry Canada to perform electromagnetic emission measurements. The recognition numbers of		
	Description	All measurement facilities used to collect the measurement data are located at Block B, FL 1, Baisha Science and Technology Park, Shahe Xi Road, Nanshan District, Shenzhen, Guangdong Province, P. R. China 518055		

## 1.3 Laboratory Condition

Ambient Temperature	20 to 25°C	
Ambient Relative Humidity	45% - 55%	
Ambient Pressure	100 kPa - 102 kPa	

## 1.4 Announce

- (1) The test report reference to the report template version v4.1.
- (2) The test report is invalid if not marked with the signatures of the persons responsible for preparing and approving the test report.
- (3) The test report is invalid if there is any evidence and/or falsification.
- (4) The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein.
- (5) This document may not be altered or revised in any way unless done so by BALUN and all revisions are duly noted in the revisions section.
- (6) Content of the test report, in part or in full, cannot be used for publicity and/or promotional purposes without prior written approval from the laboratory.

# **2 PRODUCT INFORMATION**

# 2.1 Applicant

Applicant Guizhou CVIM Technology Co., Ltd.		Guizhou CVIM Technology Co., Ltd.
	Address	4th Floor, 5th R&D Building, Zunyi Software Park, Xiazi Town, Xinpu New
		District, Zunyi, Guizhou

## 2.2 Manufacturer

Manufacturer Guizhou CVIM Technology Co., Ltd.	
Address	4th Floor, 5th R&D Building, Zunyi Software Park, Xiazi Town, Xinpu New
	District, Zunyi, Guizhou

# 2.3 Factory

Factory Huizhou Goldenchip Electronics Co., Ltd						
Addross	Factory workshop, No.12, Songyang Road, Zhongkai High-tech Zone,					
Address	Huizhou City, Guangdong					

# 2.4 General Description for Equipment under Test (EUT)

EUT Type	Smart Projector	
Model Name Under Test	T8e	
Series Model Name	T8e, X6, X8, X9, T6, T8, T9, T9e, Pro X15	
Description of Model	Above basic model name and additional model name are totally the	
Description of Model	same configuration including circuit, PCB layout, electrical part and	
name differentiation	outlook. Above basic model name and additional model name is just	
	name different.	
Hardware Version	TBD	
Software Version	TBD	
Dimensions (Approx.)	153x120x31mm	
Weight (Approx.)	500g	
Network and Wireless	Bluetooth 3.0;	
connectivity WIFI 802.11a, 802.11b, 802.11g , 802.11n (HT20/40)		

# 2.5 Ancillary Equipment

	Battery		
	Brand Name	Goldenchip Electronics	
	Model No.	783194-3S1P	
Ancillary Equipment 1	Serial No.	N/A	
	Capacitance	2600 mAh	
	Rated Voltage	11.1 V	
	Limit Charge Voltage	12.6 V	
	Adapter		
	Brand Name	Huntkey	
Ancillant Fattinment 2	Model No.	HKA03619021-8C	
Ancillary Equipment 2	Serial No.	N/A	
	Rated Input	100-240 V~, 1.0 A, 50/60 Hz	
	Rated Output	19 V=, 2.1 A	
Ancillary Equipment 3	ncillary Equipment 3 Remote Control

## 2.7 Additional Instructions

	$\boxtimes$	Special software is used.
Mode		The software provided by client to enable the EUT under
lviode		transmission condition continuously at specific channel
		frequencies individually.

During testing, Channel and Power Controlling Software provided by the customer was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product. EUT Software Settings:

Test Software Version	MT7662 QA V	1.0.3.14	
Support Units	Description	Manufacturer	Model
(Software installation media)	Computer	ThinkPad	TYPE4291

## 3.2 Verdict

No.	Description	FCC Part No.	Test Result	Verdict
1	Antenna Requirement	15.203		Pass <sup>Note1</sup>
2	RF Output Power	15.407(a)	ANNEX A.1	Pass
3	Emission Bandwidth & 99% Occupied Bandwidth	15.407(a)	ANNEX A.2	Pass
4	6 dB bandwidth	15.407(e)	ANNEX A.3	Pass
5	Power Spectral Density	15.407(a)	ANNEX A.4	Pass
6	Conducted Emission	15.207	ANNEX A.5	Pass
7	Conducted Spurious Emission and Band Edge (Authorized-band)	15.407(b) 15.209	ANNEX A.6	Pass
8	Radiated Spurious Emissions and Band Edge (Restricted-band)	15.407(b)	ANNEX A.7	Pass
9	Frequency Stability	15.407(g)	ANNEX A.8	Pass

Note <sup>1</sup>: The EUT has a permanently and irreplaceable attached antenna, which complies with the requirement FCC 15.203.

## **4 GENERAL TEST CONFIGURATIONS**

## **4.1 Test Environments**

During the measurement, the normal environmental conditions were within the listed ranges:

Relative Humidity	45% - 55%				
Atmospheric Pressure	100 kPa - 102 kPa				
	NT (Normal Temperature)	+22°C to +25°C			
Temperature	LT (Low Temperature)	-10°C			
	HT (High Temperature)	+35°C			
	NV (Normal Voltage)	19 V			
Working Voltage of the EUT	LV (Low Voltage)	12 V			
	HV (High Voltage)	19 V

## 4.3 Measurement Uncertainty

The following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2.

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Measurement	Value
Occupied Channel Bandwidth	±4%
RF output power, conducted	±1.4 dB
Power Spectral Density, conducted	±2.5 dB
Unwanted Emissions, conducted	±2.8 dB
All emissions, radiated	±5.4 dB
Temperature	±1°C
Humidity	±4%

(Diagram 5)

## 4.4.6 For Frequency Stability Test

## 5 TEST ITEMS

## 5.1 RF Output Power

#### 5.1.1 Test Limit

FCC §15.407(a)

The maximum conducted output power should not exceed:

Frequency Band (MHz)	Limit
5150-5250	250 mW
5250-5350	250 mW or 11 dBm + 10log B, whichever is less.
5470-5725	250 mW or 11 dBm + 10log B, whichever is less.
5725-5850	1 W
Note: Where "B" is the 26 dB emissions bandwidth in MHz.	

RSS-247, 6.2

The maximum conducted output power shall not exceed:

Frequency Band (MHz)	Limit	
5150-5250	N/A	
5250-5350	250 mW or 11 dBm + 10log B, whichever is less.	
5470-5725	250 mW or 11 dBm + 10log B, whichever is less.	
5725-5850	1 W	
Note: Where "B" is the 99% emissions bandwidth in MHz.		

The maximum e.i.r.p. shall not exceed:

Frequency Band (MHz)	Limit
5150-5250	200 mW or 10 dBm + 10log B, whichever is less.
5250-5350	1W or 17 dBm + 10log B, whichever is less.
5470-5725	1W or 17 dBm + 10log B, whichever is less.
5725-5850	N/A
Note: Where "B" is the 99% emissions bandwidth in MHz.	

## 5.1.2 Test Setup

The section 4.4.1 (Diagram 1) test setup description was used for this test. The photo of test setup please refer to ANNEX B.

## 5.1.3 Test Procedure

The maximum peak conducted output power may be measured using a broadband Average RF power meter. The power meter shall have a video bandwidth that is greater than or equal to the emission bandwidth and utilize a fast-responding diode detector.

The E.I.R.P used radiated test method. At a test site that has been validated using the procedures of ANSI C63.4 or the latest CISPR 16-1-4 for measurements above 1 GHz, so as to simulate a near free-space environment.

#### 5.1.4 Test Result

Please refer to ANNEX A.1.

## 5.2 Emission Bandwidth and 6 dB Bandwidth

## 5.2.1 Limit

FCC §15.407(a), RSS-247, 6.2

Within the 5.725-5.85 GHz band, the minimum 6 dB bandwidth of U-NII devices shall be at least 500 kHz.

## 5.2.2 Test Setup

The test setup photo please refer to 4.4.1 (Diagram 1) test setup description was used for this test. The photo of test setup please refer to ANNEX B.

#### 5.2.3 Test Procedure

#### **Emission bandwidth**

- 1. Set RBW = approximately 1% of the emission bandwidth.
- 2. Set VBW ≥ 3\*RBW,
- 3. Detector = Peak.
- 4. Trace mode = Max hold.
- 5. Measure the maximum width of the emission that is 26 dB down from the peak of the emission.

#### Occupied Bandwidth

- 1. Set Span = 1.5 times to 5.0 times the OBW
- 2. Set RBW = 1% to 5% of the OBW.
- 3. Set VBW ≥ 3\*RBW, Detector = Peak.
- 4. Trace mode = Max hold.
- 5. Use the 99% power bandwidth function of the instrument.

#### 6 dB bandwidth

- 1. Set RBW = 100 kHz, VBW = 300 kHz.
- 2. Detector = Peak.Trace mode = Max hold.
- 3. Allow the trace to stabilize.
- 4. Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

#### 5.2.4 Test Result

Please refer to ANNEX A.2 and ANNEX A.3.

## 5.3 Power Spectral density (PSD)

## 5.3.1 Limit

FCC §15.407(a)

The maximum power spectral density should not exceed:

Frequency Band (MHz)	Limit
5150-5250	11 dBm/MHz
5250-5350	11 dBm/MHz
5470-5725	11 dBm/MHz
5725-5850	30 dBm/500kHz

#### RSS-247, 6.2

The maximum power spectral density should not exceed:

Francis Dand (MIII-)	1 ::
Frequency Band (MHz)	Limit
5150-5250	N/A
5250-5350	11 dBm/MHz
5470-5725	11 dBm/MHz
5725-5850	30 dBm/500kHz

The e.i.r.p. spectral density should not exceed:

Frequency Band (MHz)	Limit
5150-5250	10 dBm/MHz
5250-5350	N/A
5470-5725	N/A
5725-5850	N/A

## 5.3.2 Test Setup

The section 4.4.1 (Diagram 1) test setup description was used for this test. The photo of test setup please refer to ANNEX B.

## 5.3.3 Test Procedure

Set the spectrum analyzer or EMI receiver span to view the entire emission bandwidth.

- 1. Set RBW = 510 kHz/1 MHz, VBW ≥ 3\*RBW, Sweep time = Auto, Detector = RMS.
- 2. Allow the sweeps to continue until the trace stabilizes.
- 3. Use the peak marker function to determine the maximum amplitude level.
- 4. The E.I.R.P spectral density used radiated test method. At a test site that has been validated using the procedures of ANSI C63.4 or the latest CISPR 16-1-4 for measurements above 1 GHz, so as to simulate a near free-space environment.

#### 5.3.4 Test Result

Please refer to ANNEX A.4.

## 5.4 Conducted Emission

#### 5.4.1 Limit

FCC §15.207, RSS-GEN, 8.8

For an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a  $50\mu\text{H}/50\Omega$  line impedance stabilization network (LISN).

Frequency range	Conducted Limit (dBμV)	
(MHz)	Quai-peak	Average
0.15 - 0.50	66 to 56	56 to 46
0.50 - 5	56	46
0.50 - 30	60	50

#### 5.4.2 Test Setup

The section 4.4.2 (Diagram 2) test setup description was used for this test. The photo of test setup please refer to ANNEX B.

#### 5.4.3 Test Procedure

The maximum conducted interference is searched using Peak (PK), if the emission levels more than the AV and QP limits, and that have narrow margins from the AV and QP limits will be re-measured with AV and QP detectors. Tests for both L phase and N phase lines of the power mains connected to the EUT are performed. Refer to recorded points and plots below.

## 5.4.4 Test Result

Please refer to ANNEX A.5.

# 5.5 Conducted Spurious Emission and Band Edge (Authorized-band)

5.5.1 Limit

FCC §15.407(b)

	Un-restricted band emissions	
Frequency Band (MHz)	Limit	
5150 - 5250	Outside of the 5.15-5.35 GHz band: e.i.r.p27 dBm	
5250 - 5350	Outside of the 5.15-5.35 GHz band: e.i.r.p27 dBm	
5470 - 5725	Outside of the 5.47-5.725 GHz band: e.i.r.p27 dBm	
5725 - 5850	All emissions shall be limited to a level of -27 dBm/MHz at 75 MHz or more above or below the band edge increasing linearly to 10 dBm/MHz at 25 MHz above or below the band edge, and from 25 MHz above or below the band edge increasing linearly to a level of 15.6 dBm/MHz at 5 MHz above or below the band edge, and from 5 MHz above or below the band edge increasing linearly to a level of 27 dBm/MHz at the band edge.  10 U-NII-3 band (5725-5850 MHz)  10 U-NII-3 band (5725-5850 MHz)  11 U-NII-3 band (5725-5850 MHz)  12 U-NII-3 band (5725-5850 MHz)	

RSS-247, 6.2

_ [				
l	Un-restricted band emissions			
Frequency Band Limit		Limit		
	5150 - 5250	Outside of the 5.15-5.35 GHz band: e.i.r.p27 dBm, However, any unwanted emissions that fall into the band 5250-5350 MHz must be 26 dBc, when measured using a resolution bandwidth between 1 and 5% of the occupied bandwidth, above 5.25 GHz.		
	5250 - 5350	Outside of the 5.15-5.35 GHz band: e.i.r.p27 dBm. And any emissions within the band 5150-5250 MHz shall meet the power spectral density limits of 10 dBm/MHz, The device shall be labelled "for indoor use only."		
	5470 - 5725	Outside of the 5.47-5.725 GHz band: e.i.r.p27 dBm		
	5725 - 5850	5715 -5725 MHz: e.i.r.p17 dBm 5850 -5860 MHz: e.i.r.p17 dBm Other un-restricted band: e.i.r.p27 dBm		

## 5.5.2 Test Setup

See section 4.4.2 (Diagram 2) for test setup description for the antenna port. The photo of test setup please refer to ANNEX B.

## 5.5.3 Test Procedure

Use the following spectrum analyzer settings:

Span = wide enough to capture the peak level of the in-band emission and all spurious emissions (e.g., harmonics) from the lowest frequency generated in the EUT up through the 10th harmonic. Typically, several plots are required to cover this entire span.

RBW = 1 MHz for  $f \ge 1$  GHz, 100 kHz for f < 1 GHz

VBW ≥ RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize

#### 5.5.4 Test Result

Please refer to ANNEX A.6.

# 5.6 Radiated Spurious Emissions and Band Edge (Restricted-band)

## 5.6.1 Limit

FCC §15.209 & 15.407(b), RSS-247, 6.2

Frequency (MHz)	Field Strength (μV/m)	Measurement Distance (m)
0.009 - 0.490	2400/F(kHz)	300

Note: The following formula is used to convert the equipment isotropic radiated power (eirp) to field strength.

## 5.6.2 Test Setup

The section 4.4.3-4.4.5 (Diagram 3 - Diagram 5) test setup description was used for this test. The photo of test setup please refer to ANNEX B.

#### 5.6.3 Test Procedure

Since the emission limits are specified in terms of radiated field strength levels, measurements performed to demonstrate compliance have traditionally relied on a radiated test configuration. Radiated measurements remain the principal method for demonstrating compliance to the specified limits; however antenna-port conducted measurements are also now acceptable to demonstrate compliance (see below for details). When radiated measurements are utilized, test site requirements and procedures for maximizing and measuring radiated emissions that are described in ANSI C63.10 shall be followed.

Antenna-port conducted measurements may also be used as an alternative to radiated measurements for demonstrating compliance in the restricted frequency bands. If conducted measurements are performed, then proper impedance matching must be ensured and an additional radiated test for cabinet/case spurious emissions is required.

#### General Procedure for conducted measurements in restricted bands

- a) Measure the conducted output power (in dBm) using the detector specified (see guidance regarding measurement procedures for determining quasi-peak, peak, and average conducted output power, respectively).
- b) Add the maximum transmit antenna gain (in dBi) to the measured output power level to determine the EIRP level (see guidance on determining the applicable antenna gain)
- c) Add the appropriate maximum ground reflection factor to the EIRP level (6 dB for frequencies ≤ 30 MHz, 4.7 dB for frequencies between 30 MHz and 1000 MHz, inclusive and 0 dB for frequencies > 1000 MHz).
- d) For devices with multiple antenna-ports, measure the power of each individual chain and sum the EIRP of all chains in linear terms (e.g., Watts, mW).
- e) Convert the resultant EIRP level to an equivalent electric field strength using the following relationship:

E = EIRP - 20log D + 104.8

where:

 $E = electric field strength in dB\mu V/m$ ,

EIRP = equivalent isotropic radiated power in dBm

- D = specified measurement distance in meters.
- f) Compare the resultant electric field strength level to the applicable limit.
- g) Perform radiated spurious emission test.

#### Quasi-Peak measurement procedure

The specifications for measurements using the CISPR quasi-peak detector can be found in Publication 16 of the International Special Committee on Radio Frequency Interference (CISPR) of the International Electrotechnical Commission.

As an alternative to CISPR quasi-peak measurement, compliance can be demonstrated to the applicable emission limits using a peak detector.

#### Peak power measurement procedure

Peak emission levels are measured by setting the instrument as follows:

- a) RBW = as specified in Table 1.
- b) VBW  $\geq$  3 x RBW.
- c) Detector = Peak.
- d) Sweep time = auto.
- e) Trace mode = max hold.
- f) Allow sweeps to continue until the trace stabilizes. (Note that the required measurement time may be longer for low duty cycle applications).

Table 1—RBW as a function	on of frequency
---------------------------	-----------------

Frequency	RBW
9-150 kHz	200-300 Hz
0.15-30 MHz	9-10 kHz
30-1000 MHz	100-120 kHz
> 1000 MHz	1 MHz

If the peak-detected amplitude can be shown to comply with the average limit, then it is not necessary to perform a separate average measurement.

#### Trace averaging across on and off times of the EUT transmissions followed by duty cycle correction

If continuous transmission of the EUT (i.e., duty cycle  $\geq$  98 percent) cannot be achieved and the duty cycle is constant (i.e., duty cycle variations are less than  $\pm$  2 percent), then the following procedure shall be used:

- a) The EUT shall be configured to operate at the maximum achievable duty cycle.
- b) Measure the duty cycle, x, of the transmitter output signal as described in section 6.0.
- c) RBW = 1 MHz (unless otherwise specified).
- d) VBW  $\geq$  3 x RBW.
- e) Detector = RMS, if span/(# of points in sweep) ≤ (RBW/2). Satisfying this condition may require increasing the number of points in the sweep or reducing the span. If this condition cannot be satisfied, then the detector mode shall be set to peak.
- f) Averaging type = power (i.e., RMS).
- 1) As an alternative, the detector and averaging type may be set for linear voltage averaging.
- 2) Some instruments require linear display mode in order to use linear voltage averaging. Log or dB averaging shall not be used.
- g) Sweep time = auto.
- h) Perform a trace average of at least 100 traces.
- i) A correction factor shall be added to the measurement results prior to comparing to the emission limit in order to compute the emission level that would have been measured had the test been performed at 100 percent duty cycle. The correction factor is computed as follows:
- 1) If power averaging (RMS) mode was used in step f), then the applicable correction factor is  $10 \log(1/x)$ , where x is the duty cycle.
- 2) If linear voltage averaging mode was used in step f), then the applicable correction factor is  $20 \log(1/x)$ , where x is the duty cycle.
- 3) If a specific emission is demonstrated to be continuous (≥ 98 percent duty cycle) rather than turning on and off with the transmit cycle, then no duty cycle correction is required for that emission.

NOTE: Reduction of the measured emission amplitude levels to account for operational duty factor is not permitted. Compliance is based on emission levels occurring during transmission - not on an average across on and off times of the transmitter.

## Determining the applicable transmit antenna gain

A conducted power measurement will determine the maximum output power associated with a restricted band emission; however, in order to determine the associated EIRP level, the gain of the transmitting antenna (in dBi) must be added to the measured output power (in dBm).

Since the out-of-band characteristics of the EUT transmit antenna will often be unknown, the use of a conservative antenna gain value is necessary. Thus, when determining the EIRP based on the measured conducted power, the upper bound on antenna gain for a device with a single RF output shall be selected as the maximum in-band gain of the antenna across all operating bands, or 2 dBi, whichever is greater. However, for devices that operate in multiple frequency bands while using the same transmit antenna, the highest gain of the antenna within the operating band nearest in frequency to the restricted band emission being measured may be used in lieu of the overall highest gain when the emission is at a frequency that is within 20 percent of the nearest band edge frequency, but in no case shall a value less than 2 dBi be used.

See KDB 662911 for guidance on calculating the additional array gain term when determining the effective antenna gain for a EUT with multiple outputs occupying the same or overlapping frequency ranges in the same band.

#### Radiated spurious emission test

An additional consideration when performing conducted measurements of restricted band emissions is that unwanted emissions radiating from the EUT cabinet, control circuits, power leads, or intermediate circuit elements will likely go undetected in a conducted measurement configuration. To address this concern, a radiated test shall be performed to ensure that emissions emanating from the EUT cabinet (rather than the antenna port) also comply with the applicable limits.

For these cabinet radiated spurious emission measurements the EUT transmit antenna may be replaced with a termination matching the nominal impedance of the antenna. Procedures for performing radiated measurements are specified in ANSI C63.10. All detected emissions shall comply with the applicable limits.

The measurement frequency range is from 30 MHz to the 10th harmonic of the fundamental frequency. The Turn Table is actuated to turn from 0° to 360°, and both horizontal and vertical polarizations of the Test Antenna are used to find the maximum radiated power. Mid channels on all channel bandwidth verified. Only the worst RB size/offset presented.

The power of the EUT transmitting frequency should be ignored.

All Spurious Emission tests were performed in X, Y, Z axis direction. And only the worst axis test condition was recorded in this test report.

Use the following spectrum analyzer settings:

Span = wide enough to fully capture the emission being measured

RBW = 1 MHz for f ≥ 1 GHz, 100 kHz for f < 1 GHz

VBW ≥ RBW

Sweep = auto

Detector function = peak

Trace = max hold

5.6.4 Test Result

Please refer to ANNEX A.7 and Please refer to ANNEX A.9

## 5.7 Frequency Stability

## 5.7.1 Limit

FCC §15.407(g)

Manufacturers of U-NII devices are responsible for ensuring frequency stability such that an emission is maintained within the band of operation under all conditions of normal operation as specified in the user's manual.

## 5.7.2 Test Setup

The section 4.4.6 (Diagram 6) test setup description was used for this test. The photo of test setup please refer to ANNEX B.

#### 5.7.3 Test Procedure

The EUT is installed in an environment test chamber with external power source.

Set the chamber to operate at 50 centigrade and external power source to output at nominal voltage of EUT.

A sufficient stabilization period at each temperatures is used prior to each frequency measurement.

When temperature is stabled, measure the frequency stability.

The test shall be performed under -30 to 50 centigrade and 85 to 115 percent of the nominal voltage.

Change setting of chamber and external power source to complete all conditions.

#### 5.7.4 Test Result

Please refer to ANNEX A.8.

## A.5 Conducted Emissions

Note <sup>1</sup>: The EUT is working in the Normal link mode.

Note <sup>2</sup>: Devices subject to Part 15 must be tested for all available U.S. voltages and frequencies (such as a nominal 120 VAC, 60 Hz and 240 VAC, 50 Hz) for which the device is capable of operation. So, The configuration 120 VAC, 60 Hz and 240 VAC, 50 Hz were tested respectively, but only the worst configuration (120 VAC, 60 Hz) shown here.

# A.7 Radiated Spurious Emissions and Band Edge (Restricted-band)

## A.7.1 Radiated Spurious Emissions Test Data\_

Note <sup>1</sup>: The symbol of "--" in the table which means not application.

Note <sup>2</sup>: For the test data above 1 GHz, According the ANSI C63.4, where limits are specified for both average and peak (or quasi-peak) detector functions, if the peak (or quasi-peak) measured value complies with the average limit, it is unnecessary to perform an average measurement.

Note <sup>3</sup>: The low frequency, which started from 9 kHz to 30 MHz, was pre-scanned and the result which was 20 dB lower than the limit line per 15.31(o) was not reported.

Note <sup>4</sup>: The EUT is working in the Normal link mode below 1 GHz.

No.	Frequency	Results	Factor (dB)	Limit	Margin	Detector	Table	Height	ANT	Verdict
	(MHz)	(dBuV/m)		(dBuV/m)	(dB)		(0)	(cm)		
1	30.000	25.19	-16.70	30.0	4.81	Peak	342.00	200	Vertical	Pass
2	37.516	21.50	-15.01	30.0	8.50	Peak	58.00	100	Vertical	Pass
3	45.516	17.38	-13.34	30.0	12.62	Peak	102.00	200	Vertical	Pass
4	64.184	19.38	-15.37	30.0	10.62	Peak	41.00	100	Vertical	Pass
5	104.914	12.06	-14.87	33.5	21.44	Peak	205.00	200	Vertical	Pass
6	328.200	16.36	-11.42	36.0	19.64	Peak	65.00	100	Vertical	Pass

#### 30 MHz to 1 GHz ANT H

RE Test Case\_FCC Certification\_FCC 15B ClassB 30MHz-1GHz

No.	Frequency	Results	Factor (dB)	Limit	Margin	Detector	Table	Height	ANT	Verdict
	(MHz)	(dBuV/m)		(dBuV/m)	(dB)		(o)	(cm)		
1	46.728	12.23	-13.30	30.0	17.77	Peak	302.00	200	Horizontal	Pass
2	68.790	11.04	-17.05	30.0	18.96	Peak	1.00	100	Horizontal	Pass
3	88.428	9.89	-17.43	33.5	23.61	Peak	5.00	100	Horizontal	Pass
4	104.671	11.16	-14.89	33.5	22.34	Peak	1.00	100	Horizontal	Pass
5	403.114	18.58	-9.54	36.0	17.42	Peak	5.00	200	Horizontal	Pass
6	959.998	28.26	-0.31	36.0	7.74	Peak	1.00	200	Horizontal	Pass

Note <sup>1</sup>: The device was evaluated/tested in XYZ orientation for radiated spurious emissions. And only the worst orientation of EUT was reported, which is the horizontal orientation.

Note 2: N/A is mean Fundamental signal.

Note <sup>3</sup>: The high frequency, which started from 18 GHz to 40 MHz, was pre-scanned and the result which only noise and was 20 dB lower than the limit line per 15.31(o) was not reported.

Note <sup>4</sup>: For multiple transmitter output (2TX), the quantity 10 log (NANT) dB has been evaluated in radiated spurious, which the value of each chain have more than 3 dBm margin.
